PROFESSIONAL SUMMARY

Versatile, solutions-oriented IT professional with a strong foundation across Systems Support, Cybersecurity analysis, and Software Development. Combines rigorous technical training from UVU Africa (CapaCiTi) and Google Professional certifications with practical project experience building security tools, full-stack applications, and AI agent workflows. Proven ability to troubleshoot hardware/software incidents, analyze network telemetry, automate repetitive processes, and communicate effectively across technical and non-technical stakeholders. Eager to deliver immediate operational value in an entry-level IT Support, Help Desk, Junior Developer, or Cybersecurity role.

CORE TECHNICAL COMPETENCIES

- **IT Support & Systems:** Hardware/Software Troubleshooting, Windows OS, Linux (Ubuntu/Debian), Active Directory Basics, User Account Provisioning, Ticket Resolution (SLA Adherence), Network Configuration (TCP/IP, DNS, DHCP).
- **Cybersecurity & Networking:** Network Traffic Analysis (Wireshark), Vulnerability Assessment (Burp Suite, Metasploit, SAST scanning), Log Analysis, Threat Detection, Port Scanning (Nmap), Virtualization (VirtualBox).
- **Software Development & AI:** Python, Java, C++, C#, React, FastAPI, Streamlit, Git/GitHub, REST APIs, LangChain, Retrieval-Augmented Generation (RAG) Architecture.
- **Productivity & Collaboration:** Microsoft Office 365 (Word, Excel, PowerPoint, Outlook), Google Workspace, Remote Desktop Support.
- **Core Strengths:** Root Cause Analysis, Technical Documentation, Customer Service, Adaptability, Incident Management.

TECHNICAL PROJECTS

(Code repositories available at github.com/cybersne)

Enterprise AI Agent & RAG Pipeline | Python, LangChain, FastAPI, Streamlit

- Architected a modular Retrieval-Augmented Generation (RAG) system with an interactive Streamlit UI, enabling grounded natural language query resolution against custom knowledge stores.
- Implemented secure input validation and API middleware to prevent prompt injection and mitigate hallucinations.

- Automated data ingestion pipelines and vectorized document chunks for low-latency similarity search.

Static Application Security Testing (SAST) Scanner | *Python, AST, Git*

- Developed an automated code auditing tool that parses Abstract Syntax Trees (AST) to flag common software vulnerabilities and insecure dependencies prior to production deployment.
- Reduced manual code review overhead by generating structured JSON vulnerability reports categorized by severity.

Network Log Threat Detector & Port Scanner | *Python, Socket, Regex*

- Built a multithreaded network exploration tool to detect open service ports, banners, and unauthorized services across target subnets.
- Programmed a behavioral log parser to detect anomalous authentication attempts, brute-force patterns, and suspicious connection spikes.

PROFESSIONAL TRAINING & CERTIFICATIONS

Systems & Software Development Trainee | *CapaCiTi Tech Accelerator (UVU Africa)* | 2026

- Completed hands-on practical training covering IT infrastructure, network support, systems analysis, and enterprise software engineering best practices.
- Collaborated in agile sprints to resolve mock enterprise IT incident tickets, optimize software codebases, and present technical solutions to peers.

Generative AI Development Certification | *WeThinkCode_* | 2026

- Mastered prompt engineering principles, agentic workflows, and LLM application integration patterns.

Google Professional Certificates | *Coursera* | 2025 – 2026

- Google IT Support Professional Certificate
- Google Cybersecurity Professional Certificate
- Google Data Analytics Professional Certificate
- Google Project Management Professional Certificate

EDUCATION

Diploma in Tourism Management

Vaal University of Technology, South Africa

- **Transferable Skills:** Cross-functional communication, conflict resolution, client account coordination, service excellence, and team resource scheduling.

WORK EXPERIENCE

Administrative & Client Operations Assistant | *Stones Weddings & Conference Centre* | 2024 – 2025

- Maintained internal scheduling databases and front-desk computer systems, ensuring 99%+ system uptime for event bookings and client communications.
- Resolved day-to-day office hardware, printer, and network connectivity issues, reducing operational downtime during high-volume events.
- Liaised directly with clients and vendors to gather requirements, de-escalate service issues, and deliver structured documentation.

SUGGESTED SKILLS TO ADD

- **ITIL Foundation Principles:** Understanding incident, problem, and change management lifecycles is a major differentiator for Tier 1 help desk and desktop support roles.
- **Ticketing Systems:** Highlight any hands-on or lab familiarity with platforms like Jira Service Management, ServiceNow, or Zendesk.
- **Bash & PowerShell Scripting:** Emphasize running terminal-based administration tasks (e.g., managing user groups, checking event logs, querying disk usage).
- **SOC / SIEM Awareness:** Add familiarity with tools like Splunk, Microsoft Sentinel, or Elastic SIEM for cybersecurity screening.

SUGGESTED PROJECTS TO SHOWCASE

- **Automated IT Help Desk Ticketing Bot (Discord / Slack / Telegram):** Build a lightweight Python webhook bot that allows users to submit hardware/software issues, parses urgency using keyword matching, and logs tickets to a SQLite database or Google Sheet.
- **Active Directory Home Lab:** Document a local VirtualBox lab running Windows Server (Domain Controller) and Windows 10/11 client machines, showcasing user creation, group policy (GPO) deployment, and permission management.
- **Ransomware Canary Engine:** A background daemon that monitors a sacrificial directory for unauthorized bulk file modifications or encryption attempts, terminating rogue processes and alerting administrators.
